| Baggage Capacity (Cu. Feet): | 106                 |

The Bombardier Challenger 300 is a super mid-sized business jet designed and developed by Bombardier Aerospace of Canada to fulfill a growing need for a super mid-sized category aircraft that could accommodate 8-12 passengers yet still provide the economics of a large aircraft. As such, a new category of business jets was established, and the Challenger 300 was introduced in 2001, enabling superior fuel efficiency and operational reliability.

With over six feet of stand-up cabin space and spacious seating for up to 10 passengers, the Challenger 300 offers unparalleled comfort. The interior features luxurious leather seating for six, a large three-seat divan, and an optional tenth seat in the enclosed lavatory. Moreover, the spacious 106 cubic foot baggage compartment inside the cabin ensures passengers' baggage is stowed away during the flight while being accessible at all times.

The Challenger 300 features state-of-the-art amenities onboard, making it a popular choice for business and leisure travelers alike. The aircraft features a full galley with ample space for meal prep, a coffee maker, microwave, and refreshments, WIFI, an enclosed aft lavatory, an Airshow, CD/DVD Players, 110 outlets for plug-and-play access for personal electronics, and Satellite Phone.

Given its size, the Bombardier Challenger 300 has an extraordinary operational range. It can fly nonstop with a maximum range of 3100 NM (3600 statute miles), covering major distances in a single leg. For example, the Challenger 300 enables nonstop flights between New York and South America, California and Canada, and Florida and Alaska.
